Durham University

Version Control: *Workshop Task*

Chris Marcotte[1]
Durham University

[1]For errata and questions: christopher.marcotte@durham.ac.uk

Using Version Control Productively

Bad Practice

- Unclear Repository Names
- Intermittent commits
- Uninformative commit messages
- Useless README, no licensing

Good Practice

- Descriptive Repository Names
- Frequent commits
- Specific commit messages
- Documentation in repo

Using Version Control Productively

Bad Practice

- Unclear Repository Names
- Intermittent commits
- Uninformative commit messages
- Useless README, no licensing

Good Practice

- Descriptive Repository Names
- Frequent commits
- Specific commit messages
- Documentation in repo

Put in the effort *now* for easy maintenance in the *future*.

Version Control Task

1. Create a *local* repository (e.g. for your notes on this module) using the CLI
2. Add files to the repository (e.g. your notes related to using *Git*)
3. Commit your changes with an appropriate message
4. Create a *remote* repository (e.g. on GitHub)
5. Connect your local repository to the remote repository
6. Push your changes to the remote repository
7. Create a new branch (e.g. for your coursework notes)
8. Switch to the new branch
9. Make some changes to your notes (additive and subtractive)
10. Commit your changes with an appropriate message
11. Push your changes to the remote repository
12. Create a pull request to merge your changes into the main branch
13. Review the pull request and merge it into the main branch
